

Community Benefits

Our commitments to your community are:

We will be sensitive to locally protected landscapes and nature conservation areas, and we welcome opportunities to enhance the ecological value of the land.

We will minimise visual impact where possible and maintain appropriate screening throughout the lifetime of the project, managed through a land management and/or ecology plan.

We will encourage land diversification by proposing continued agricultural use or incorporating biodiversity measures within our projects.

We will provide a number of ways for people to get in touch – email, survey, phone and post.

We will engage with the community in advance of submitting a planning application.

We will do as much buying and employing locally as possible.

At the end of the project life we will return the land to its former use and the solar panels will be disposed of responsibly.

We will act considerately during construction and look after the land for the lifetime of the project.

The solar farm can be used for educational purposes – maybe by environmental groups and local schools.

We will offer a community benefit fund to local organisations and causes which can be used to improve local projects and schemes.
